

# Lagado Premium GP Lens Materials

A Portfolio With Proven Performance

The Lagado portfolio of premium, GP lens materials combines proven performance with superb surface-wetting characteristics. Lagado utilizes a unique low-temperature polymerization process produced in small, tightly controlled batch sizes to deliver products of the highest quality. Lagado premium GP lens materials have been recognized by many as the materials of choice for GP lens wearing success.

### SUPERIOR DEPOSIT RESISTANCE WITH LOW LENS FLEXURE

With a Dk of 26, FLOSI offers superior deposit resistance, rigidity, stability and exceptional comfort by enabling lens surfaces to remain consistently wettable. FLOSI is recommended for patients with deposit problems or specialty lens designs requiring low lens flexure.

### PROVEN ON-EYE COMFORT

ONSI's proven performance means exceptional on-eye lens comfort as both a problem solver and a problem preventer. ONSI offers excellent oxygen delivery (Dk 56) and superior hydrophilic surfaces.

### COMBINING HIGH DK OF 97 AND PERFORMANCE

TYRO is specially formulated to achieve a critical balance of rigidity and flexibility with the added benefits of wettability, comfort and oxygen permeability. TYRO is an excellent choice for specialty large diameter and scleral lens designs.

Give your patients the performance and comfort they deserve. Ask your laboratory partner to use Lagado premium lens materials for your next custom contact lens order.
